## 1 Module Description

This module is a clone of the single VCA in the Eμ Systems Analog Modular Synthesizer. It has both linear and exponential control modes.

The original Revision 1 single VCA design dates back to the autumn of 1972 when Dave and Scott were setting up their new synthesizer company in Santa Clara, and it's based around the CA3080 OTA. From October 1974 the front panel toggle switch had a centre position for simultaneous linear and exponential control.

The CA3080 VCA was a bit noisy, so around 1978 it was replaced by a SSM2010 based version, which improved the S/N ratio and reduced the audio distortion. It is this Revision 2 design that has been replicated, although it uses extremely rare SSM2010 chips!

INPUTS: SIGNAL +, SIGNAL -, FULL SIGNAL  
CV1, CV2, FULL CV

OUTPUT: AUDIO SIGNAL

POTS: SIGNAL +, SIGNAL -  
CV1 LEVEL, CV2 LEVEL, GAIN

SWITCH: MODE = EXP or LINEAR

LED: AUDIO OUTPUT LEVEL

The front panel controls for the VCA consists of GAIN, AUDIO SIGNAL LEVELS and CV LEVELS. There is a switch that selects exponential or linear control mode and a LED that shows overall audio output level. The front panel jacks are SIGNAL1, SIGNAL2, FULL SIGNAL, CV1, CV2, FULL CV and OUTPUT.

### Specifications:

|                             |           |
|-----------------------------|-----------|
| Maximum signal attenuation  | 120dB     |
| Control Rejection (trimmed) | 50dB      |
| Noise (10 – 10 kHz)         | 0.1mV RMS |
| Distortion                  | 0.05%     |

## 2 The Original Circuit

The original module dates back to around 1978 and I have used the schematics from 1980. This Revision 2 has been designed to harness the first analog chips that Dave Rossum co-designed with Ron Dow in the late 1970's. The single VCA uses the SSM2010, which was the first SSM chip to use dual 15V power rails and therefore be usable in E-mu synthesizers.

The circuit has TL082 Op Amp buffers for the audio signals before and after the VCA and a TL082 for summing CV signals into the exponential control pin. A CA3046 transistor array is used to create a linear response for the exponential control pin, rather than using the separate linear control pin on the SSM2010.

## 3 The AM Circuit

The AM circuit is a straight copy of the original E $\mu$  Systems VCA circuit. The audio input and summing Op Amps can be left as TL082's or upgraded to modern devices such as OP2134 for audio and LT1013 for CV processing.

I have added a simple LED driver circuit using a TL082. This LED shows the audio signal output level. You can fit a bi-colour LED and omit the signal diode D1 if you want the LED to respond to both positive and negative waveform energy. I use a blue/red bi-colour LED.

The REV01 board is the production board. There are no errors. Some PCB's are marked as AM2001; this is the same PCB as AM2005.

## 4 PCB

The PCB is double sided with solder mask and silkscreen on the upper surface. The component names are shown in the silk screen but not the component values. The size of the PCB is 80mm x 100mm.

The PCB is held to the front panel at 90 degrees by the use of two pot brackets manufactured by Omeg ([www.omeg.co.uk](http://www.omeg.co.uk)). These brackets (and pots) are centred at 40mm apart. The SIGNAL+ and SIGNAL- pots hold the PCB to the front panel.

## 5 PCB Connections

The PCB has a number of connections designed for MTA 0.1" headers, so that the panel components can be connected to the PCB. I use headers and sockets to enable the board to be easily replaced, however you can solder wires straight to the PCB.

| PCB Header Name | Pin # | What is it?   | Where does it go?       |
|-----------------|-------|---------------|-------------------------|
| <b>INPUTS</b>   | Pin 1 | Audio Input   | Jack Socket Full Signal |
|                 | Pin 2 | Audio Input   | Jack Socket Signal+     |
|                 | Pin 3 | Audio Input   | Jack Socket Signal-     |
| <b>CV-INS1</b>  | Pin 1 | CV Input      | Jack Socket CV2         |
|                 | Pin 2 | CV Input      | Jack Socket CV1         |
|                 | Pin 3 | CV Input      | Jack Socket Full CV     |
| <b>CV1</b>      | Pin 1 | CV1 Level Pot | CV1 pot Pin 1           |
|                 | Pin 2 | CV1 Level Pot | CV1 pot Pin 2           |
|                 | Pin 3 | CV1 Level Pot | CV1 pot Pin 3           |
| <b>CV2</b>      | Pin 1 | CV2 Level Pot | CV2 pot Pin 1           |
|                 | Pin 2 | CV2 Level Pot | CV2 pot Pin 2           |
|                 | Pin 3 | CV2 Level Pot | CV2 pot Pin 3           |
| <b>GAIN</b>     | Pin 1 | Gain Pot      | GAIN pot Pin 1          |
|                 | Pin 2 | Gain Pot      | GAIN pot Pin 2          |
|                 | Pin 3 | Gain Pot      | GAIN pot Pin 3          |
| <b>LED</b>      | Pin A | LED           | LED Anode               |
|                 | Pin C | LED           | LED Cathode             |
| <b>OUTS</b>     | Pin 1 | Audio Output  | Jack Socket Output      |
|                 | Pin 2 | Audio Output  | Firmware connection     |
| <b>PAD</b>      | Pin 1 | Panel Earth   | Jack socket earth bus   |

## 6 Pots

The PCB is designed to be used with Spectrol 248J conductive plastic pots; they are a reasonable price and very high quality. The PCB will work with either 3.18mm or 6.35mm spindle diameter models. The PCB can be used with other pots such as sliders provided they are all mounted off the PCB.

## 7 Switch

The switch is configured for selecting either linear or exponential mode.

| Switch Name | Pin #  | What is it? | Where does it go? |
|-------------|--------|-------------|-------------------|
| <b>MODE</b> | Top    | Lin Input   | SWITCH Pin 3      |
|             | Centre | CV Inputs   | SWITCH Pin 1      |
|             | Bottom | Exp Input   | SWITCH Pin 2      |

## 8 Power

The module should be powered from a well regulated +15V and -15V power supply, current consumption is around 25mA. The power connector is the standard two ground MOTM/Oakley 4-pin Molex connector. One ground is for the circuit, the other is for the panel ground (PAD).

## 9 Front Panel

The AM2005 is a standard AM format module which can be built into a number of panel formats. You can use your own format or choose from the following:

### AM High Density

This panel format enables a higher density of controls on each panel, and panels are usually 90mm wide. All the pots have a small spindle diameter of 3.18mm which enables the control knobs to be located closer together. Both 19mm and 13mm control knobs can be used. The "look and feel" is similar to the ARP 2500.

Panels are 4U high and 90mm wide. Panels are fitted to horizontal 12mm angled aluminium strip using 4mm diameter machine screws in each corner of the panel. The strip is mounted into a standard 19" rack unit with small wooden end strips.

### AM Low Density

This panel format has a lower density of controls on each panel, and panels sometimes have to be 135mm wide to accommodate all the controls. All the pots have a spindle diameter of 6.35mm which means 19mm control knobs can be used, such as those used in the Eµ Systems Modular. The "look and feel" is similar to the Eµ Systems Modular.

Panels are 4U high and 90mm or 135mm wide. Panels are fitted to horizontal 12mm angled aluminium strip using 4mm diameter machine screws in each corner of the panel. The strip is mounted into a standard 19" rack unit with small wooden end strips.

### MOTM Panels

This established panel format has pot spacing very close in dimensions to the AM PCB's, MOTM is 41.275mm compared with 40mm of the AM format. This means you can design MOTM style front panels but with 40mm spacing and this won't look significantly different. Alternatively you maybe be able to mount the AM PCB on 41.275mm hole centres by slightly bend the pot brackets to fit.

## 10 Building the Module

This module is simple to build. The recommended build order is:

- Resistors
- Inductors
- IC Sockets
- Capacitors
- Trimmers
- Connectors
- Transistors
- Pot Brackets and Potentiometers

Check all the electrolytic capacitors and transistors are fitted the right way round. Before fitting the IC's its worth connecting up the module to a power supply and checking that the power rail voltages are as expected at each IC socket, then power down, and fit the IC's ensuring correct orientation.

Power up and try out the VCA. Then proceed to trimming.

## 10 Trimming

This module is simple to set-up.

**ETRIM** This trimmer adjusts the accuracy of the exponential mode.

**GTRIM** This trimmer adjusts the gain of the VCA. Apply a 10V peak to peak audio signal into the VCA, and set GAIN to maximum. Trim for the same audio level at input and output.

**DIST** This trimmer adjusts the distortion of the SSM2010 VCA. Apply a 10V peak to peak audio signal into the VCA, and set GAIN to maximum. Trim for minimum signal output distortion observing using an oscilloscope or listening.

**REJECT** This trimmer adjusts the control rejection of the VCA. Apply a 10V peak to peak audio signal into the VCA and trim for minimum signal output.

## 11 Special Components

The AM2005 makes use of a small number of specialist components:

### SSM2010

The SSM2010 chip is hard to locate, contact me for details.

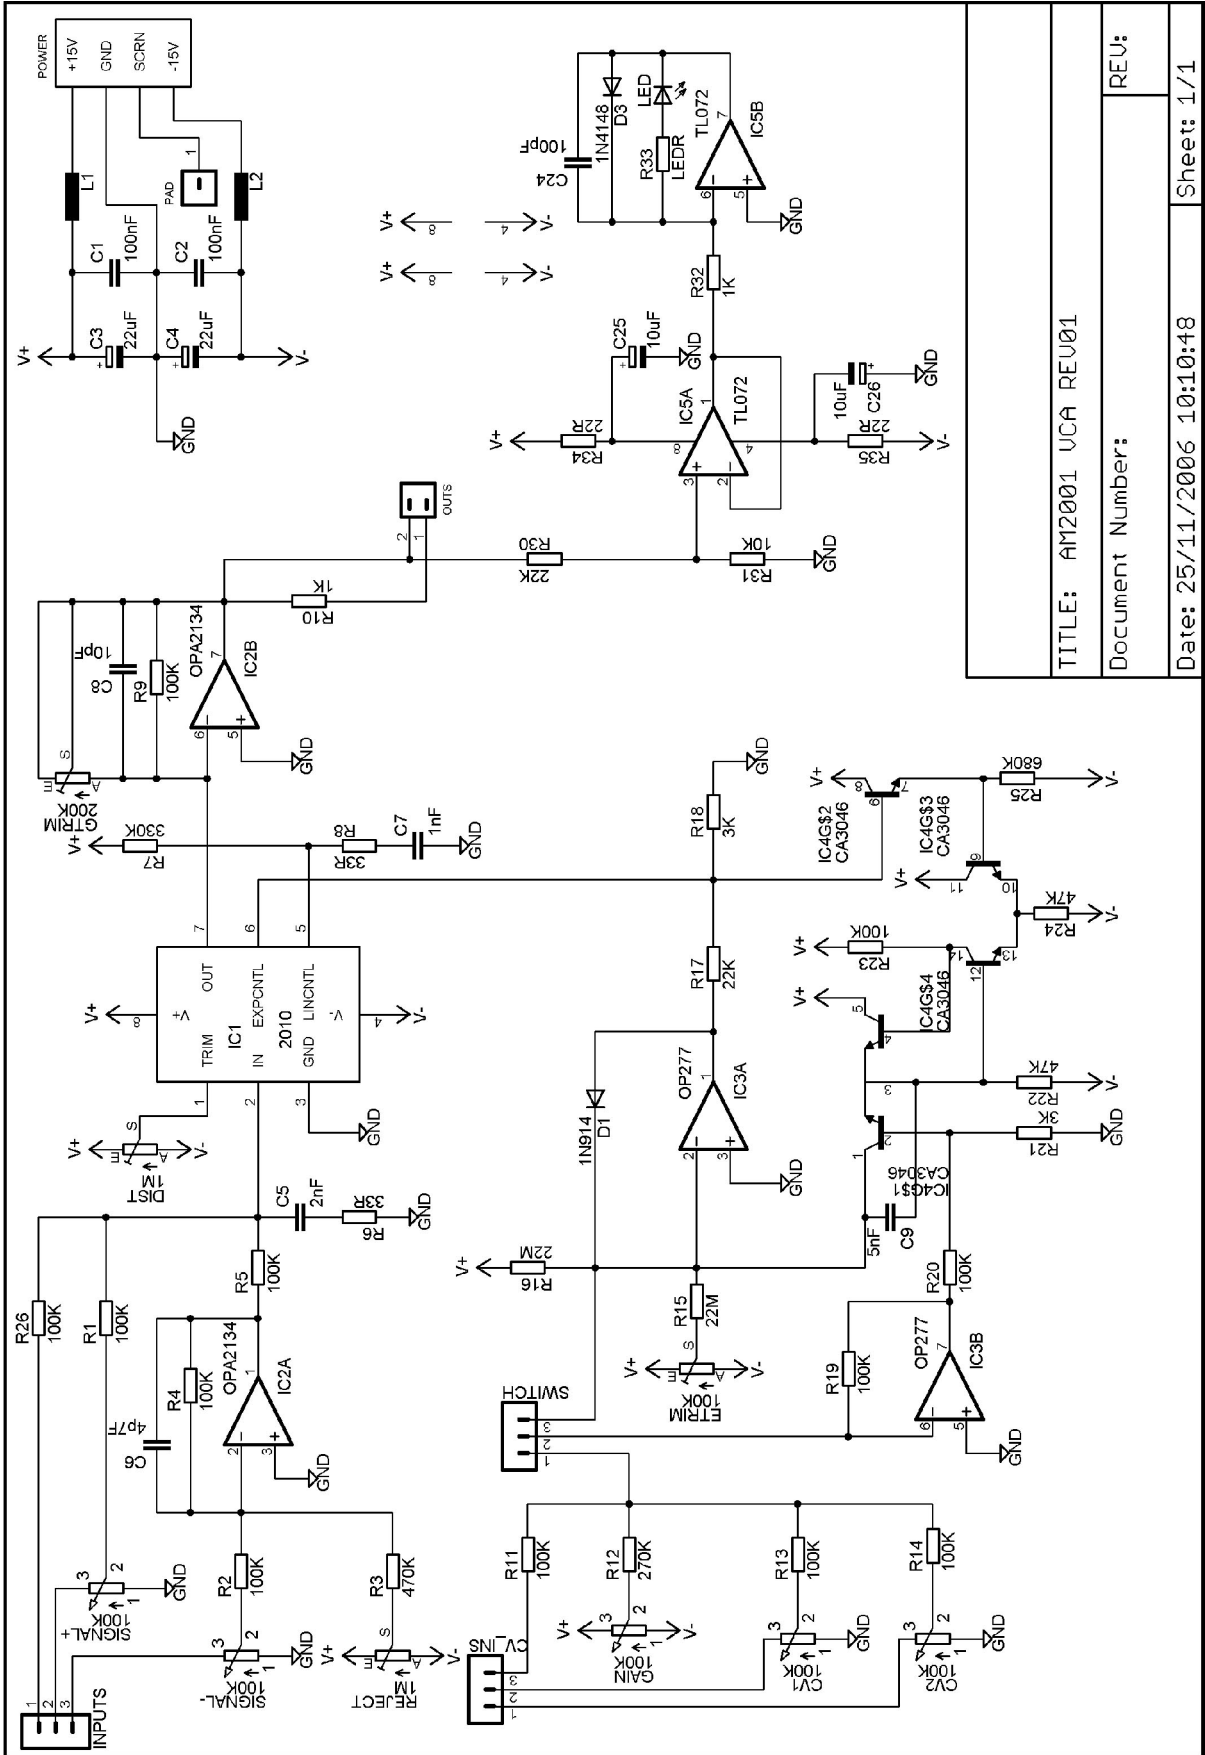

### ECO/Omeg Pot Brackets

These can be obtained from Omeg in the UK. <http://www.omeg.co.uk/>. Oakley have them again, and I have stock them too.

## 12 Parts Listing

| Part Number   | Value     | Quantity | Comments                |
|---|-----------|----------|-------------------------|
| <b>Capacitors</b>                                     |           |          |                         |
| C1, C2  | 100nF 63V | 2        | Multi-layer Polyester   |
| C3, C4  | 22uF 25V  | 2        | Radial Electrolytic     |
| C5  | 2nF       | 1        | Multi-layer Polyester   |
| C6  | 4p7F      | 1        | Low K Ceramic           |
| C7  | 1nF       | 1        | Multi-layer Polyester   |
| C8  | 10pF      | 1        | Low K Ceramic           |
| C9  | 5nF       | 1        | Multi-layer Polyester   |
| C24   | 100pF     | 1        | Low K Ceramic           |
| C25, C26  | 10uF 25V  | 2        | Radial Electrolytic     |
| <b>Resistors</b>                                      |           |          |                         |
| R1, R2, R4, R5, R9, R11, R13, R14, R19, R20, R23, R26 | 100K      | 11       | All 1/4W 1% metal film  |
| R3  | 470K      | 1        |                         |
| R6, R8  | 33R       | 2        |                         |
| R7  | 330K      | 1        |                         |
| R10, R32  | 1K        | 2        |                         |
| R12   | 270K      | 1        |                         |
| R15, R16  | 22M       | 2        |                         |
| R17, R30  | 22K       | 2        |                         |
| R18, R21  | 3K        | 2        |                         |
| R22, R24  | 47K       | 2        |                         |
| R25   | 680K      | 1        |                         |
| R31   | 10K       | 1        |                         |
| R33   | LEDR      | 1        | Value to suit LED       |
| R34, R35  | 22R       | 2        |                         |
| <b>Trimmers</b>                                       |           |          |                         |
| REJECT, DIST  | 1M        | 2        | 25 turn cermet trimmer  |
| ETRIM   | 100K      | 1        | 25 turn cermet trimmer  |
| GTRIM   | 200K      | 1        | 25 turn cermet trimmer  |
| <b>Potentiometers</b>                                 |           |          |                         |
| CV1, CV2, GAIN  | 100K LIN  | 3        | Spectrol 248            |
| SIGNAL+ SIGNAL-                                       | 100K LOG  | 2        | Spectrol 248            |
| <b>Passives</b>                                       |           |          |                         |
| L1, L2  |           | 2        | Inductor                |
| <b>Semiconductors</b>                                 |           |          |                         |
| IC1   | SSM2010   | 1        | VCA chip                |
| IC2   | OPA2134   | 1        | Dual Op Amp, audio      |
| IC3   | LT1013    | 1        | Dual Op Amp, low offset |
| IC4   | CA3046    | 1        | Transistor Array        |
| IC5   | TL072     | 1        | Dual Op Amp             |
| D1  | 1N914     | 1        | Signal diode            |

| <b>Part Number</b>                        | <b>Value</b> | <b>Quantity</b> | <b>Comments</b>                 |
|---|--------------|-----------------|---------------------------------|
| D3  | 1N4148       | 1               | Signal diode                    |
